User's Guide to Installing MailScraper

Software by Team 4

Step 1: Locating the installation file.

Locate the installation file, by default this is likely in your "Downloads" folder.

☐	Name	Type	Size
☒	 MailScraperInstaller_1.0.exe	Application	14,862 KB

For more advanced users, you may wish to verify the hash of your file for security and integrity reasons:

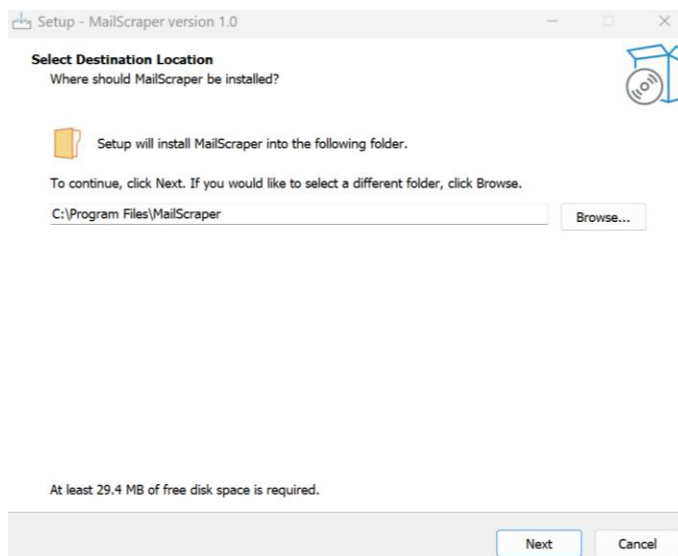

`c69178c6174c8b839c79caa017135afcfcbba94a114497793a2b0a02dcc670f3`

Step 2: Software Installation

To begin installing the product please run the application located in the previous step, this will begin the install wizard.

NOTE: On windows, your user account control setting may prompt you to allow the application to "make changes to your device," please allow to properly install MailScraper.

With the installer open, please select the location where you wish to install the files necessary for the software and click next. By default, this is set to "*Program Files.*"

If you wish, you can have an application shortcut created to be placed on your Desktop; if you wish to take advantage of this, please mark the checkbox next to "Create a desktop shortcut."

Select Additional Tasks

Which additional tasks should be performed?

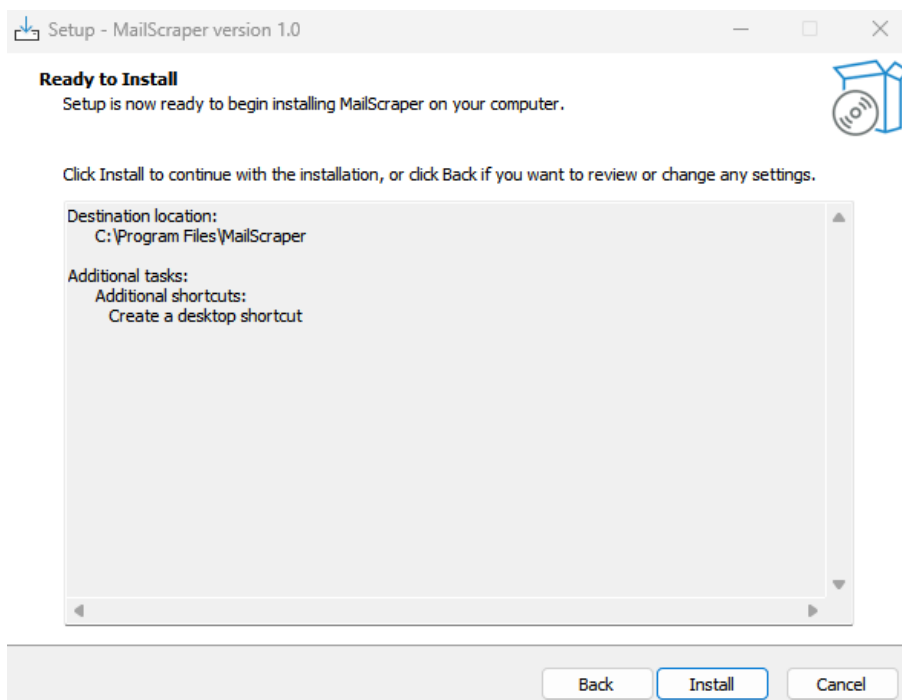

Select the additional tasks you would like Setup to perform while installing MailScaper, then click Next.

Additional shortcuts:

☐ Create a desktop shortcut

Regardless of whether you marked the checkbox or not, to proceed with the installation, please select next.

Please review the installation options. To continue, click "Install."

The software component of MailScaper is now installed, please move onto the next section to continue the setup procedure.

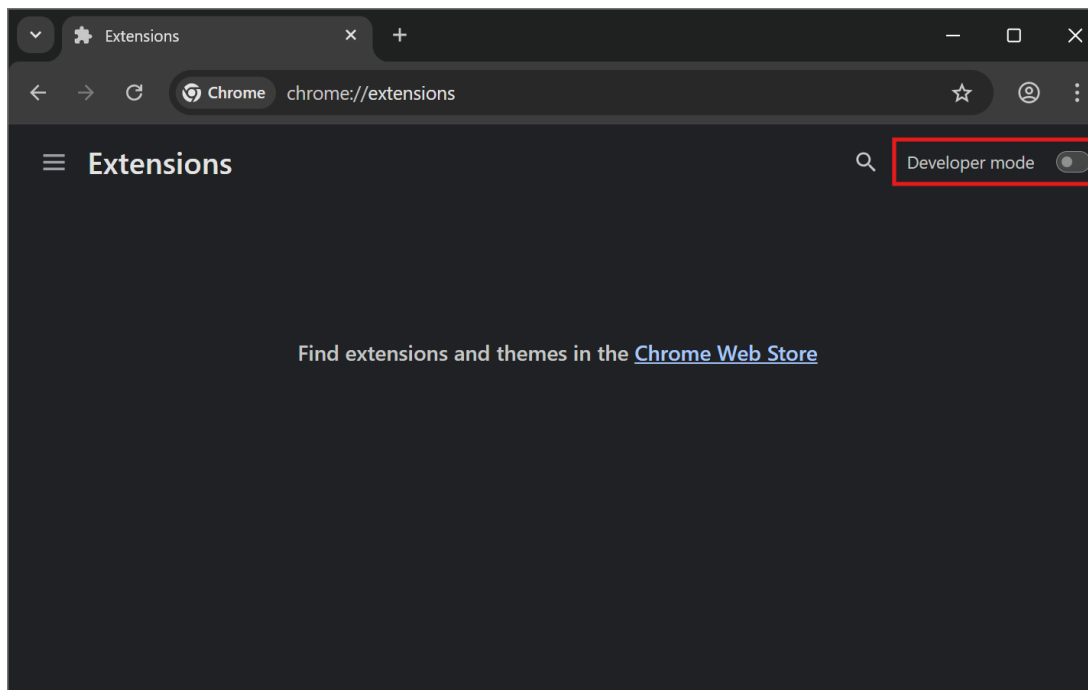

Step 3: Chrome Preparation

While our early product awaits approval to be published on the Chrome Extension Store, developer mode must be enabled on the browser to allow for manual installation of extensions.

Please navigate to “*chrome://extensions/*” into the address bar of Chrome, or click the kebab menu (3 vertical dots) in the top right and select “Extensions” and then “Manage Extensions.”

From here, enable developer mode by clicking the “Developer mode” toggle in the top right of the page.

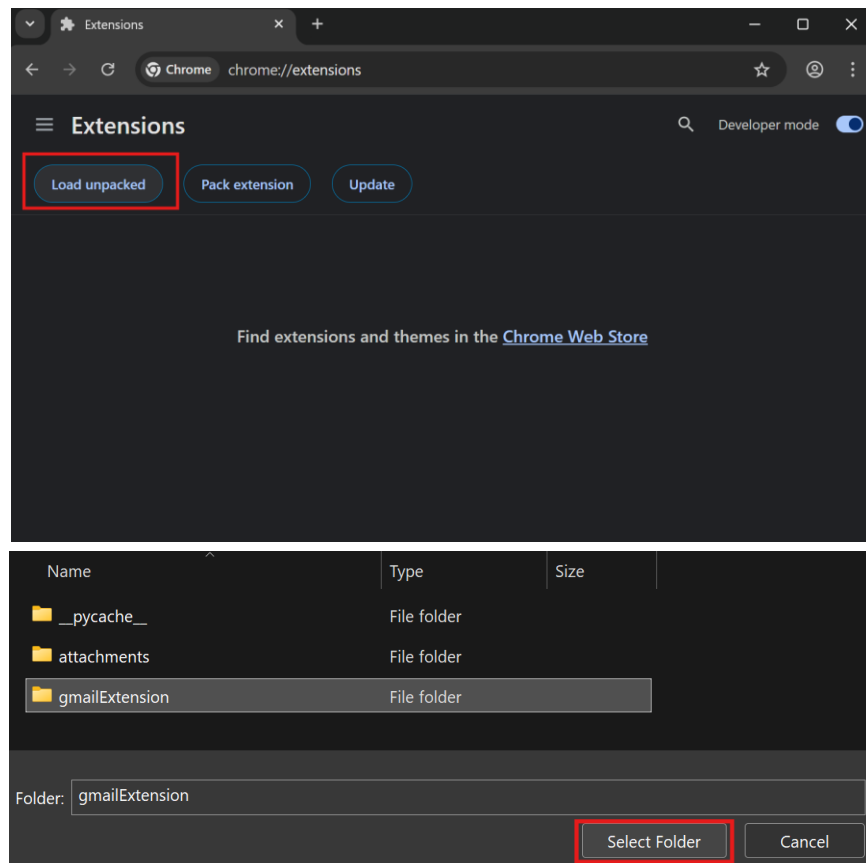

Your browser is now ready to install the extension.

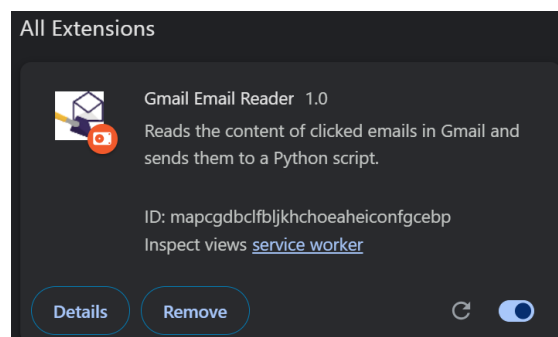

Step 4: Extension Loading

To load the extension, remain at or navigate back to “*chrome://extensions/*” and select “Load unpacked” in the top left corner. Now find the installation location you previously determined for MailScrapper. Once there, left click the “gmailExtension” folder and then select “Select Folder” to load the extension.

The extension should now be loaded and ready for use.

Step 5: Opening the Software

To begin using the software, navigate to either the installation location, or your Desktop if you chose to make a shortcut during the installation process. Once there, now run either “server.exe” in the installation folder, or “MailScraper” on your Desktop. You should now see a command window.

```
MailScraper
* Serving Flask app 'server'
* Debug mode: off
WARNING: This is a development server. Do not use it in a production deployment. Use a production WSGI server instead.
* Running on http://127.0.0.1:5000
Press CTRL+C to quit
```

Congratulations, you are ready to go and can now browse your email with a little more peace of mind!

Uninstalling:

Should you wish to uninstall the program, it is as easy as navigating to the install folder and running the “unins000.exe” program. Additionally, you will need to “Remove” the extension in Chrome.

Name	Type	Size
__pycache__	File folder	
attachments	File folder	
gmailExtension	File folder	
core.py	Python Source File	10 KB
server.exe	Application	13,258 KB
unins000.dat	DAT File	11 KB
unins000.exe	Application	3,505 KB
